ULTIMATE TEXAS OMAHA — How to Play

Two hands, one board. Beat the dealer with both to win.

You and the dealer each get **six cards**. Split yours into a **2-card Texas Hold'em** hand and a **4-card Omaha** hand. Both hands play against the same five community cards.

How a hand goes

1. Bet the Base. One unit, before the cards are dealt.
2. Set your hands. Put 2 cards in the Hold'em box and 4 in the Omaha box. Tap to lock — no changes after this. The dealer sets their hand by a fixed house way.
3. Make one Play bet — the earlier, the bigger:
- before the flop: **4×** your Base, or check
- after the flop: **2×**, or check
- after the river: **1×** — required if you haven't bet yet (no folding)

4. Showdown. Your Hold'em plays the dealer's Hold'em; your Omaha plays the dealer's Omaha.

Hand rules

- **Hold'em:** best five cards from your 2 cards and the 5 board cards — any combination (you may play the board).
- **Omaha:** exactly **2** of your 4 cards plus exactly **3** board cards.
- **A tie counts as a lost hand.**

Payouts

You win…	Result	Base	Play
both hands	WIN	push (returned)	pays 1:1
one hand	PUSH	push	push
no hands	LOSS	loses	loses

Examples ($10 Base)

Play bet	What happened	You get
4× ($40)	Won both hands	+$40
2× ($20)	Won Hold'em, lost Omaha	$0 (push)
1× ($10)	Won Hold'em, tied Omaha	$0 (tie = lost hand → push)
1× ($10)	Lost both	–$20

Tip: you only lose your Base when you lose **both** hands. Turn the page for how to play your hand.

ULTIMATE TEXAS OMAHA — How to Play Your Hand

1. Set your hand (2 cards to Hold'em, 4 to Omaha)

Three or four of a kind: two of them in Hold'em.
Two or three pairs: your highest pair in Hold'em.
One pair: the pair in Hold'em. *Exception:* a pair of Tens or lower plus an unpaired **Ace and King** — put A-K in Hold'em.
No pair:

- second-highest card is a **Queen or higher** → your **two highest** cards in Hold'em;
- otherwise, highest card is an **Ace or King** → that card with the **lowest card of its suit** (no card of its suit: with your lowest card);
- otherwise → your **two lowest** cards in Hold'em.

Suits: when you can choose, keep same-suited cards together in Omaha.
Why low cards? You only lose your Base when you lose **both** hands — one very strong Omaha hand protects it.

2. Before the flop — bet 4× with

- a Hold'em pair of **Jacks or better**;
- **Tens** if 2+ of your Omaha cards are Ten or higher;
- **Nines** if 3+ of your Omaha cards are Ten or higher;
- **Ace-King** if 2+ of your Omaha cards are Ten or higher.

Otherwise check.

3. On the flop — bet 2× if any of these

- your **Omaha** hand already has **three of a kind or better** (using exactly 2 of its cards);
- unpaired flop, and your **Hold'em** has **top pair or better** (top pair, overpair, two pair+) — on flops whose highest card is 7 or lower you need **two pair or better**;
- unpaired flop, your **Omaha** has **two pair** and your **Hold'em** has any pair using one of its own cards;
- paired flop, and your **Hold'em** has **three of a kind or better**.

Otherwise check.

4. At the river

If you haven't bet yet, bet **1×** (required).

Strategy book v2. Against a perfect player the house edge is about 4.6% of the Base; following this page gives a house edge of about 7.3%. Prototype math (simulation), not certified.
